

Dante Config Editor V3.6

Quick start - offline editing of Dante XML files

Third-party tool, not an official Audinate product. V3.6 is a development version and may still contain bugs. Work on a copy and always validate the final XML by importing it into the appropriate official Dante tool before real use.

Recommended workflow

- 1** Open XML
Choose a Dante export. The application works offline and does not access the network.
- 2** Review alerts
Show affected devices and verify every reported item.
- 3** Edit
Use Device details, Easy patch on Windows, the visual patch workshop on Mac, or global actions. Lock devices that must be excluded.
- 4** Review
Use Modified only and Before / after. Unknown technical changes are blocked.
- 5** Save as
Choose a new name. The destination is replaced atomically and backed up when it already exists.
- 6** Test the import
Import the result into Dante Controller on a working copy before any field operation.

Useful features

Visual patch On Windows, every preview joins a cumulative batch and the compact matrix supports drag ranges. On Mac, use the Avalonia visual workshop.	Recovery A copy is written in the background after a short delay. Save as makes the new destination the session reference.
Import / Export JSON/CSV, DMT XLSX/ODS, A&H; CSV, and Yamaha ZIP labels are grouped with bundled dLive, Avantis, CL, and QL templates.	Synoptic Group devices by location and export a colored SVG or PDF without changing Dante XML.
Machine bank Duplicate a generic role, save it in a shareable bank, or add an independent instance to a project.	

Console labels: choose Native A&H; CSV - dLive/Avantis, Native Yamaha ZIP - CL/QL, or DMT XLSX/ODS. Templates are bundled. Generic DCE CSV is not a dLive Director file.

Exercise: Atomic Bomb has its own tab after Safety and log. Clear categories you want to spare, confirm three times, then use Save as to create the trainee file. Technical identifiers remain protected.

Remember: no real-time control, no Audinate API, and no guarantee for every XML format. Import validation in official tools remains mandatory.
