

# Dante Config Editor 2026.5

Quick start - offline editing of Dante XML files

Third-party tool, not an official Audinate product. Work on a copy and always validate the final XML by importing it into the appropriate official Dante tool before real use.

## Recommended workflow

- 1

Open XML  
Choose a Dante export. The application works offline and does not access the network.
- 2

Review alerts  
Show affected devices and verify every reported item.
- 3

Edit  
Use Devices, Matrix, Easy patch, Rx-to-Tx list, or global actions. Lock devices that must be excluded.
- 4

Review  
Use Modified only and Before / after. Unknown technical changes are blocked.
- 5

Validate and save  
The pre-export assistant separates errors, warnings, and information. Fix errors, acknowledge warnings, then choose a new name.
- 6

Test the import  
Import the result into Dante Controller on a working copy before any field operation.

## Useful features

|                                                                                                                                                                    |                                                                                                                                             |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------|
| Visual patch<br>Every click or drag applies the patch immediately. Replacement warnings for already-patched Rx channels are enabled by default and can be cleared. | First launch<br>A guided welcome offers to open XML, create a project, browse banks, or read the guide. Reopen it from Help > Discover DCE. |
| Import / Export<br>JSON/CSV, DMT XLSX/ODS, A&H; CSV, and Yamaha ZIP labels are grouped with bundled dLive, Avantis, CL, and QL templates.                          | Synoptic<br>Group devices by location, open a separate proportion-preserving preview, and export SVG or PDF without changing Dante XML.     |
| Machine bank<br>Review provenance and verification level, then prepare a sanitized contribution or add an independent instance.                                    | License<br>The trial lasts 30 days. DCE then remains fully accessible; a commercial or complimentary license removes the startup reminder.  |

Console labels: choose Native A&H; CSV - dLive/Avantis, Native Yamaha ZIP - CL/QL, or DMT XLSX/ODS. Templates are bundled. Generic DCE CSV is not a dLive Director file.

Exercise: Atomic Bomb has its own screen. Clear categories you want to spare, turn the key, click the cover to open it, then press ARM, LOCK, and FIRE. Then use Save as to create the trainee file. Technical identifiers remain protected.

Remember: no real-time control, no Audinate API, and no guarantee for every XML format. Import validation in official tools remains mandatory.
