

Dante Config Editor 2026.1 Beta

Quick start - offline editing of Dante XML files

Third-party tool, not an official Audinate product. Version 2026.1 is a beta and may still contain bugs. Work on a copy and always validate the final XML by importing it into the appropriate official Dante tool before real use.

Recommended workflow

- 1

Open XML
Choose a Dante export. The application works offline and does not access the network.
- 2

Review alerts
Show affected devices and verify every reported item.
- 3

Edit
Use Devices, Matrix, Easy patch, Rx-to-Tx list, or global actions. Lock devices that must be excluded.
- 4

Review
Use Modified only and Before / after. Unknown technical changes are blocked.
- 5

Save as
Choose a new name. The destination is replaced atomically and backed up when it already exists.
- 6

Test the import
Import the result into Dante Controller on a working copy before any field operation.

Useful features

Visual patch Every click or drag applies the patch immediately. Replacement warnings for already-patched Rx channels are enabled by default and can be cleared.	Recovery A copy is written in the background after a short delay. Save as makes the new destination the session reference.
Import / Export JSON/CSV, DMT XLSX/ODS, A&H; CSV, and Yamaha ZIP labels are grouped with bundled dLive, Avantis, CL, and QL templates.	Synoptic Group devices by location, open a separate proportion-preserving preview, and export SVG or PDF without changing Dante XML.
Machine bank Export or import a complete bank, open the GitHub catalog, and add an independent instance to a project.	

Console labels: choose Native A&H; CSV - dLive/Avantis, Native Yamaha ZIP - CL/QL, or DMT XLSX/ODS. Templates are bundled. Generic DCE CSV is not a dLive Director file.

Exercise: Atomic Bomb is located under Advanced tools. Clear categories you want to spare, confirm three times, then use Save as to create the trainee file. Technical identifiers remain protected.

Remember: no real-time control, no Audinate API, and no guarantee for every XML format. Import validation in official tools remains mandatory.
